

# AIL Presents...

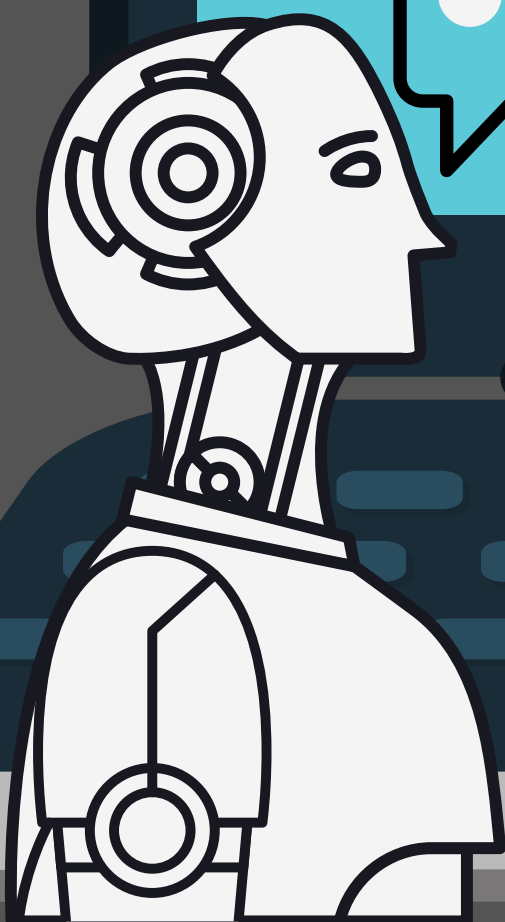

## ARTIFICIAL INTELLIGENCE: TURNING OUR WORLD UPSIDE DOWN

**The AI Genie is out of the bottle.**

**AI is coming, powerfully, wave after wave, and already transforming all parts of our society - from business to healthcare to education, and beyond - and it has only just begun. The challenge we face is harnessing AI so that it benefits society, all the while constructing guard rails to prevent its misuse.**

**Are we up to the challenge?  
Our lives may depend on it.**

**Join John Ferries for a Presentation**

**WED., AUGUST 30**

**4:00 PM**

**Clements Hall, Ivey Science Center, CSC**

# ARTIFICIAL INTELLIGENCE:

## TURNING OUR WORLD UPSIDE DOWN

In January, at Davos, Bill Gates said about AI: “This revolutionary new ChatGPT Artificial Intelligence technology, just introduced, will change our world. Its development is as significant as the invention of the Internet. It has the potential of fundamentally changing our lives in ways we cannot even fully comprehend or predict today.”

John will explain what this breakthrough technology is, the amazing ways it can empower people to be more creative and productive in their lives, and its rapidly emerging use in military weaponry. Numerous examples of his interactive dialogues with ChatGPT will be shown. He will also cover the high-stakes power struggle between tech giants Google, Microsoft, Apple, Facebook, and others to become the global leader in perfecting and applying this new technology within their search engine devices. And, importantly, he will conclude with a sober assessment of the risks and very scary threats of its misuse, and an update on current U.S. Senate hearings on devising guard rails to prevent its misuse before it is too late.

John has served as president of AIL and has led 12 AIL courses after retiring with his wife Donna to New London. They now live in Valley Forge, PA.
