

CURRENT CHALLENGES TO FOREST HEALTH IN NEW HAMPSHIRE

Dode Gladders

Sullivan County Extension
Forester,
UNH Cooperative Extension

Forests cover more than 80 percent of New Hampshire's land area, offering opportunities for recreation, wildlife habitat, and income. However, a number of destructive insects and pathogens now threaten the health of our native trees. This presentation will cover the most serious challenges, including how to identify the problem, options for management and mitigation, and long-term implications for our forests.

Wednesday, September 13
Doors open at 5 PM
Presentation begins at 6 PM
Galligan's Pub

As always, advanced registration is required.
